

NGUYEN HUY BINH

Automation Solution Engineer

+84 939 871 834 32nguyenhuybinh@gmail.com

ABOUT ME

Automation Developer with a Computer Science background and a process-oriented mindset. With around 2 years of experienced in building automation tools from requirement analysis to deployment for SMEs and internal business systems. Seeking to apply technical skills in n8n, Power Automate, and Python to create efficient and streamlined workflows.

EDUCATION

Industrial University of Ho Chi Minh City
Major Of Computer Science - 2022 - 2025

CERTIFICATES

- Intermediate English B1 | Cambridge
- BigData - Hadoop/Spark| Udemy

CERTIFICATES

- Programming Languages** : Python, Java(OOP).
- Low-code & Workflow** : Kestra, n8n, PowerAutomate (Power Platform).
- Automation & Testing** : Selenium WebDriver, Appium, ADB.
- Version Control** : Git, Jira.
- Databases & Cloud** : Postgre , S3.

EXPERIENCE

PNJ - (Phu Nhuan Jewelry JSC) **June – September 2025**
Lowcode Intern - Application Development & Operations

- Situation & Task** : The company required a high-precision internal evaluation system to manage 360-degree surveys for the main branch. So I build and maintain the backend logic for the survey system.
- Action**: Collaborated with a 4-member team to orchestrate complex business logic flows using Power Automate and apps in PowerPlatforms. Conducted rigorous testing and logic validation to handle high-stakes data reporting.
- Result**: Delivered final reports with 100% data integrity directly to C-level executives.

Project BASE Automation **Feb 2025 - Now**
Founder & Technical Lead

- Situation & Task**: SME clients faced operational bottlenecks and high costs due to manual production scheduling and unstructured data handling. Develop scalable automation solutions to optimize processes and transition businesses.
- Action**: Implement a Decision Support System (DSS) for production scheduling using n8n and Python to automate complex operational planning.
- Result**: Successfully deployed commercialized solutions that reduced manual intervention and provided clients with real-time, data-driven operational insights.

Freenlancer **Mar 2023 - Now**

SELECTED TECHNICAL PROJECTS

- Social Media Management Framework (Selenium & Multi-threading)**
 - Developed a high-performance automation suite using Python & Kestra platform to manage complex workflows on social platforms.
 - Implemented multi-threading and optimized MySQL integration to handle high-frequency data operations.
- Real Estate Data Intelligence System**
 - Built a robust web scraping pipeline using n8n & Python webhooks to aggregate and standardize millions of property records.
 - Designed data validation logic to ensure integrity before database storage, directly supporting market analysis.
- Automated Identity Verification (KYC) Tool**
 - Engineered an end-to-end automation tool for account registration and KYC processes, incorporating Captcha-solving and real-time Telegram API notifications.
